

Equations belong in the document.

Author presentation MathML alongside normal HTML text, headings, and layout.

01 / SUPERSCRIPT

Mass and energy

$$E = m c^2$$

A familiar equation uses identifiers, an operator, and a superscript.

02 / FRACTION

Average speed

$$\frac{d}{t}$$

A fraction keeps the numerator and denominator in a structured expression.

03 / SQUARE ROOT

Right triangle

$$\sqrt{a^2 + b^2}$$

Nested expressions combine a root, powers, and an addition.

This example exercises three presentation MathML expressions. It is not a claim of full MathML or TeX support.
