

Give the content a clear reading order.

Structured prose

Clear headings and readable paragraphs make a technical report easier to scan.

Keep the source document alongside its output so a reader can inspect the same example.

Use inline code for identifiers such as `HtmlConversionDocument`.
Keep normal prose in the body typeface.

Text remains part of the generated PDF; the page is not a screenshot of a web browser.

A repeatable workflow

1. Write a small, self-contained HTML document.
2. Parse it with the managed HTML API.
3. Export the supported document and image formats.

Delivery formats

- PDF for a paginated document
- PNG for a raster preview
- SVG for a vector image
